Forces and Braking

Mark Scheme 1

Level	GCSE (9-1)
Subject	Combined Science: Trilogy - Physics
Exam Board	AQA
Topic	6.5 Forces
Sub-Topic	Forces and Braking
Difficulty Level	Silver Level
Booklet	Mark Scheme 1

Time Allowed: **44 minutes**

Score: **/41**

Percentage: **/100**

Grade Boundaries:

M1.(a) the time it took from seeing the green light to pressing a key

1

(b) he could have been distracted

1

(c) boys have a shorter reaction time than girls

or

reaction time improves with practice

1

(d) collect more data / larger sample size

must link to response in 06.3

or

take more repeat readings per person

1

(e) reaction time will have less effect (as distance increases)

1

because it is a smaller proportion of the total race time

1

(f) **Level 3 (5–6 marks):**
A coherent description of the race, which uses data from the graph, including discussion
of the meanings of the changing gradient of both of the lines.

Level 2 (3–4 marks):
Multiple pieces of data taken from the graphs used to evidence a comparison between
the runners. Likely to include discussion of the meaning of the (changing) gradient of one of the lines. Answer not coherently structured.

Level 1 (1–2 marks):
Some data taken from the graph, but may be limited to one aspect or simple readings.
Lack of coherence in answer.

0 marks:
No relevant content.

Indicative content

- A starts at constant speed *for 440 m / 60 s*
- A then slows down *from 60 s*
- the gradient for B is lower at the start so B starts at a slower speed
- the gradient for B increases so B accelerates
- B overtook A *at 700 m / 114 s*
- B has a greater top speed because the maximum gradient is greater
- B won the race *in 126 s* / beat A *by 34 s*

- B won the race *in 126 s* / beat A *by 34 s*

6

(g) tangent drawn at 60s

1

data obtained using correct information

1

5.5(m / s)

accept answer in range 5.3 to 5.7

1

[15]

M3.(a) 3.3×10^2 m / s

1

(b) **Level 2 (3–4 marks):**
A detailed and coherent explanation of the shape of the graph and what it says about the motion of the car between each point is given. Values from the graph are clearly referred
in a logical and consistent way.

Level 1 (1–2 marks):
An attempt at an explanation of the motion of the car is given, which may be incomplete
or not in a logical sequence. Values from the graph may not be referred to or referred to incorrectly.

0 marks:
No relevant content.

Indicative content

- between **A** and **B** car is moving from origin
- the gradient of the line shows it's moving at a constant speed
- speed between these points is 250 / 20 = 12.5 m / s
- between **B** and **C** car is stationary / not moving
- because between these points the graph is flat
- showing that the car's speed is 0 m / s
- between **C** and **D** car is moving further from origin
- at a constant speed
- speed is 250 / 20 = 12.5 m / s
- movement between these points is the same as at **A–B**
- because the gradient is the same
- between **D** and **E** moves towards origin
- at a constant speed
- speed is 500 / 30 = 16.7 m / s
- gradient between **D** and **E** shows that car moves faster **or** at a greater speed than between any other points

4

(c) kinetic energy = 0.5 × mass × $(\text{speed})^2$

allow $E_k = ½\ mv^2$

1

(d) ½ × 1 650 × 30^2

1

= 742.5 (kJ)

answer must be in kJ for mark

1

*allow 742.5 with no working shown for **2** marks*

(e) **Level 3 (5–6 marks):**
A detailed and coherent explanation is given of why the man may not be able to stop in time, clearly and logically linking factors that could affect the braking in the situation given

Level 2 (3–4 marks):
An explanation is given, with an attempt at linking factors affecting braking distance to
the situation given. Links made between factors and explanation may not be complete
and the logic may be unclear.

Level 1 (1–2 marks):
Simple relevant statements made about factors affecting braking, but no attempt to link
to explanations of how they are relevant in the situation given

0 marks:
No relevant content.

Indicative content

- overall stopping distance related to thinking distance and braking distance
- factors affecting thinking distance:
  - driver could be distracted
  - driver could be tired
  - driver could be on medication that affects thinking (eg make drowsy)
  - driver could have drunk alcohol
  - mean that reaction time will be longer so will not brake as quickly
- factors that affect braking distance:
  - condition of car (eg worn brakes means can't stop as quickly, wear on tyres reduces friction with road)
  - speed car is travelling (faster means more kinetic energy)
  - condition of the road (eg the road is wet so friction between tyres and road reduced)
