

# Congruent Triangles

## Mark Scheme

Level	GCSE
Subject	Maths
Exam Board	Edexcel GCSE
Topic	Congruent Triangles
Grade Level	Grade 5
Booklet	Mark Scheme

**Time Allowed:** 17 minutes

**Score:** /14

**Percentage:** /100

**Grade Boundaries:**

1.

Diagram **NOT** accurately drawn

In the diagram,  $AB = BC = CD = DA$ .

Prove that triangle  $ADB$  is congruent to triangle  $CDB$ .

$AB = CD$  (Given)  
 $AD = BC$  (Given)  
 $BD$  is common in both triangles.

SSS  $\therefore$  triangles are congruent

(Total 3 marks)

2.

Diagram **NOT** accurately drawn

$ABC$  is an equilateral triangle.

$D$  lies on  $BC$ .

$AD$  is perpendicular to  $BC$ .

(a) Prove that triangle  $ADC$  is congruent to triangle  $ADB$ .

$AD$  is common in both triangles  
 $\hat{ADC} = \hat{ADB}$  both  $90^\circ$  (perpendicular meets line at  $90^\circ$ )  
 $AB = AC$  (sides in equilateral triangle are equal)

RHS  $\therefore$  triangles are congruent

(3)

(b) Hence, prove that  $BD = \frac{1}{2}AB$ .

$BD + CD = BC$   
 As triangles are congruent  $BD = CD = \frac{1}{2}BC$   
 $BC = AB \therefore BD = \frac{1}{2}AB$

(2)

(Total 5 marks)

4.

Diagram NOT  
accurately drawn

The diagram shows a triangle  $ABC$ .

$LMNB$  is a parallelogram where

$L$  is the midpoint of  $AB$ ,

$M$  is the midpoint of  $AC$ ,

and  $N$  is the midpoint of  $BC$ .

Prove that triangle  $ALM$  and triangle  $MNC$  are congruent.

You must give reasons for each stage of your proof.

$$BL = AL \quad (L \text{ is midpoint})$$

$$BL = MN \quad (\text{opposite sides in parallelogram})$$

$$\therefore \underline{AL = MN}$$

$$BN = CN \quad (N \text{ is midpoint})$$

$$BN = LM \quad (\text{opposite sides in parallelogram})$$

$$\therefore \underline{CN = LM}$$

$$\underline{AM = MC} \quad (M \text{ is midpoint})$$

$SSS \therefore$  triangles are congruent

(Total 3 marks)
